Experience

Automation Engineer, Cloubeat

August 2019 – Present

cloubeat.io is a test automation, analytics and monitoring platform.

- Developing and maintaining scripts in a page object model.
- Using Playwright in TypeScript and Selenium in Python on various SaaS applications.
- Integrating system based scripts, CI/CD workflows and managing version control using Git.
- Helping various customers to implement test automation infrastructure in their organization.
- Instructing QA teams on web & mobile automation best practices and pipeline management.
- Creating automated tests for native and hybrid mobile apps using Appium and Selenium.
- Building SOAP and REST API, database, and performance tests using JMeter and Postman.

QA Engineer, FAST

September 2018 – August 2019

fast-apps.com is a networking platform for the freight industry.

- Helped to insure we release the best possible version in time for the global entrepreneur week, which we ended up winning and getting an investment from the Israeli Shark Tank.
- Carrying out in depth manual tests including sanity, functionality, error handling, recovery, integration, compatibility, regression and UI / UX on both web and mobile environments.
- Responsibility for planning and executing STP, STD, STR documents for the entire team.
- Tracking issues, visual bugs as well as logical errors and reporting them using JIRA.

Personal Projects

rilon.onrender.com is an online courses site where you can register, buy and watch courses.

chatup.onrender.com is a chat app that lets you write messages and stores them in Firebase.
